UNITED KINGDOM OF GREAT BRITAIN AND NORTHERN IRELAND

**STATEMENT BY THE DELEGATION OF THE UNITED KINGDOM
OF GREAT BRITAIN AND NORTHERN IRELAND TO THE OPCW
AT THE FIFTY-SEVENTH MEETING OF THE EXECUTIVE COUNCIL**

Thank you Mr Chairperson,

The United Kingdom supports the statement made by Bulgaria on behalf of the European Union. This Council has been summoned by Russia today on an anniversary that marks a sombre moment in the history of chemical disarmament.

This meeting, about the United Kingdom, has been called today by the Russian Federation at very short notice. We were unsighted as to Russia's intentions behind today's session. They have not sought to discuss this at all with us in advance. They have not sought to engage us on the agenda or the timing. Indeed our Permanent Representative is unable to attend today as he is overseas.

Perhaps Russia has pressed ahead with the meeting today to make a rather political point. Exactly one year ago, between the hours of 6:30 and 7:00, more than 100 people were killed—and hundreds more—injured in a horrific nerve agent attack in the town of Khan Shaykhun in Syria. It should be deeply upsetting to all of us here to know that not only are chemical weapons attacks in Syria continuing, but exactly one month ago today, nerve agent was also used here in Europe.

There are unfortunate parallels between the way Russia treated the OPCW and international mechanisms in the wake of chemical weapons use in Syria and the approach it is taking to the OPCW today. In 2016, the Joint Investigative Mechanism (JIM), a body unanimously set up by the United Nations Security Council, found that Syria had conducted three chlorine attacks and that Daesh had launched an attack using sulphur mustard. In response, Russia used its veto to prevent the United Nations Security Council from taking action. The OPCW was able to pass a decision, but this was in spite of fierce Russian opposition. At the end of 2016, the JIM was renewed unanimously. Yet Russia then sought to close the JIM down after its thorough, scientific investigation found that Syria was responsible for the horrific Khan Shaykhun attack. The Security Council has not been able to respond to those findings because of Russian obstruction. And then Russia closed the JIM down.

It seems clear that Russia will never accept the legitimacy of any investigation into chemical weapons use unless it comes up with an answer Russia likes. Why else would Russia have refused to renew the JIM's mandate? Why else would Russia not bother to wait a week or

two until the OPCW had completed its technical assistance to the United Kingdom and produced its report before calling this meeting?

During the last session of the OPCW Executive Council, our Permanent Representative promised to update this Council on the progress of our investigation into the reckless use of a military-grade nerve agent. He made two statements at that session and circulated our Prime Minister's letter to the OPCW Director-General. On 16 March, we circulated Ambassador Wilson's letter to the Director-General, in which he requested OPCW technical assistance under paragraph 38(e) of Article VIII. We have followed the model of technical assistance that other States Parties who have been subject to chemical weapons attacks have followed, including Iraq in 2016 and 2017. The OPCW's work is still underway and, as previously promised, the United Kingdom looks forward to sharing its findings with this Council once we have received the report from the Technical Secretariat.

What happened in Salisbury on 4 March was a reckless and indiscriminate act, which threatened the lives of innocent civilians. More than 130 people were affected by the attack. More than 50 people, including first responders and three children, reported to hospital.

To recap our work to date, on 12 March—once it became clear that a chemical weapons attack had taken place—our Foreign Secretary summoned the Russian Ambassador in London and sought an explanation from the Russian Government. We asked Russia two clear questions: how did a Russian-developed military-grade nerve agent come to be used on the streets of Salisbury? And had Russia lost control of its stocks? We also asked Russia to provide full disclosure of its programme to the OPCW. In light of the extraordinary, urgent, and grave nature of the attack, we requested an explanation within 24 hours. We were entitled to make such an urgent request following a chemical weapons attack on United Kingdom soil, which left individuals gravely ill in hospital.

Russia failed to respond to any of those questions, and instead has generated more than 24 contradictory and changing counter narratives. They have suggested that Sweden or the United States might have carried out the attack or, according to Foreign Minister Lavrov on 2 April, the United Kingdom attacked its own people to “distract from Brexit”. These are shameless, preposterous statements. The United Kingdom—supported by many other countries—has assessed that it is highly likely that the Russian State is responsible for this attack, and that there is no plausible alternative explanation. This is based on our identification of the nerve agent used, our knowledge that Russia has produced this agent and remains capable of doing so, Russia's record of conducting State-sponsored assassinations, and our assessment that Russia views defectors as suitable targets for assassination.

On Monday 19 March, following our request for technical assistance under paragraph 38(e) of Article VIII of the Convention, experts from the Technical Secretariat met with officials from the Defence Science and Technology Laboratory (DSTL) and the police to discuss the process for collecting samples for verification. The Technical Secretariat team was able to obtain environmental and biomedical samples for onward despatch to OPCW-designated labs. We hope that a briefing from the Technical Secretariat on their activities will be possible once they have completed their work and finalised their report. The United Kingdom will share the findings with this Council.

In the meantime, over three weeks after the United Kingdom's 12 March request to Russia, and with two people remaining under constant care in hospital, Russia has still provided no

substantive response. On the contrary, Russia has treated the offensive use of a nerve agent in Europe with sarcasm, contempt, and defiance. Its insistence on an Executive Council meeting today—before the OPCW has completed its bilateral technical assistance to the United Kingdom under paragraph 38(e) of Article VIII is yet another cynical move, showing a lack of respect for the Convention, the OPCW, and the Technical Secretariat. That they called this meeting on the anniversary of Khan Shaykhun shows contempt for those victims too.

Indeed, a senior Russian official said at a meeting in Moscow recently that “Within the framework of the Chemical Weapons Convention and the OPCW, there is no capability for providing assessments of what happened in Salisbury.”

And yesterday, the Russian embassy in the United Kingdom tweeted “Russia will accept results of the OPCW Salisbury poisoning investigation only if Russian experts participate in it.”

We requested assistance from the Technical Secretariat in accordance with the Convention; accordingly, analysis of samples is being carried out by independent, impartial experts through the designated laboratory system, which all States Parties support in accordance with the Convention. The work of the Technical Secretariat must remain impartial. Russia’s refusal to accept the results of the OPCW’s investigation unless Russian experts participate in it suggests that Russia is opposed to the independence and impartiality of the Technical Secretariat and is nervous about what the results will show.

Russia’s statements demonstrate a wilful ignorance of the Convention’s provisions and, worse than that, a disdain for the independence and competence of the Technical Secretariat. We will not agree to Russia’s demand to conduct a joint investigation into the attack in Salisbury because the United Kingdom—supported by many other countries—has assessed that it is highly likely that the Russian State is responsible for this attack, and that there is no plausible alternative explanation. There is no requirement in the Chemical Weapons Convention for a victim to engage the likely perpetrator in a joint investigation. To do so would be perverse.

In line with the Convention, the United Kingdom has led our own response, engaging the OPCW as appropriate. We are conducting an urgent investigation to assist the victims and ensure accountability for the use of chemical weapons on United Kingdom soil, including potential criminal accountability under the United Kingdom Chemical Weapons Act of 1996. There is a painstaking, independent, ongoing police investigation to identify the specific individuals responsible for the crime.

What we want to happen now is clear.

First and foremost, this must never happen again. There is no place for chemical weapons in the twenty-first century. Not in Syria, not in Iraq, not in Malaysia, and not in the United Kingdom.

We are deeply concerned by the continuing attempts to erode the norm against chemical weapons use. It is incumbent on every party to the Convention, and every member of this Executive Council to uphold the international rules against the use of chemical weapons and to ensure that those responsible for their use are held to account. Regrettably, Russian behaviour to date suggests that one member of this Council does not share these objectives.

Finally, we call on Russia to meet its obligations under this Convention, to end its offensive weapons programme, and to declare its programme of Novichoks so that the world never again sees use of this horrific nerve agent.

Mr Chairperson, we would like to request that this statement is issued as an official document of this meeting of the Executive Council and placed on the OPCW site.

Thank you, Mr Chairperson.
